Introduction of project

Our project element of Gym management includes Registration of user ,storing their into the system and also computerized give a user ID for every customer store the detail of every customer it into in it includes but facility to know the current status of each customer details .

user can search ability customer and the details of bill using the

user ID the gym management can be entered using username and password only person into the database the date that can be deprived easily the interface is very user friendly the detour well protector for personal use the depot processing very fast

The objective of this project was to build a program for maintaining the details of all the members, employees and inventory. The system developed is able to meet all the basic requirements. The management of the records (both members and employees) will be also benefited by the proposed system, as it will automate the whole procedure, which will reduce the workload. The security of the system is also one of the prime concerns.

There is always a room for improvement in any software, however efficient the system may be. The important thing is that the system should be flexible enough for future modifications. The system has been factored into different modules to make system adapt to the further changes. Every effort has been made to cover all user requirements and make it user friendly.

- ❑ **Goal achieved:** The System is able provide the interface to the owner so that he can replicate his desired data. .
- ❑ **User friendliness:** Though the most part of the system is supposed to act in the background, efforts have been made to make the foreground interaction with user(owner) as smooth as possible. Also the integration of the existing system with the project has been kept in mind throughout the development phase.
